## Partners In Data Care

### Empower your students With Data Care Techniques, Recovery & Security

We are all aware of the growth in IT and Computers in our country. This growth is leading to a massive deposit of data (Information) in all Industry sectors. This data has to be cared for, it has to be secure. Information Security (IS) is one of the fastest growing segments of the Information Technology (IT) market. We have to be ready for the drastic manpower demand in the forthcoming years for this. As per IDC, the worldwide demand for IS Services was approximately \$8 billion in 2001, estimated to grow to \$23.6 billion by 2006. A report by Nasscom states that the current demand for IS professionals is over 68,000 in India and over 1,60,000 worldwide! This is estimated to grow to over 1,77,000 in India and 4,88,000 worldwide by 2008.

Unistal Systems Pvt. Ltd. is the Data Care industry's most experienced and technologically advanced provider of data care products and solutions.

Unistal's Business Continuity solution range covers data loss prevention, data recovery, automated backup, OS & application restoration. Unistal's Products help user to work with maximum efficiency without any time and data loss.

Unistal also provides its data recovery solutions 24/7/365 through its services network. With more than 13 years experience performing successful data recoveries, Unistal has served customers across the globe including Secret services, government agencies, corporate houses, and numerous computer users. Unistal has developed the industry's widest range of data recovery products and services for all media types and operating systems anywhere, anytime.

Headquartered right in the heart of New Delhi, India has three offices and 100 service labs strategically located across India, Middle East and Europe.

Unistal understands that data care starts from the user hence training them on the data loss prevention, recover ability and manageability would go a long way in its mission of Information Protection.

#### The Need for These Courses?

Information Security & data recovery skills are required not only in computer specialized roles, but also in other professionals like science, accounts, arts, management etc.

Development of Information Security skills be addressed at the base level of IT education, i.e. across the engineering colleges, IT's, Government colleges, Universities across the country. This will ensure that a significant number of IT professionals will have basic knowledge of IS.

Since our country has varied levels of technical strengths, It is essential that basic as well as specialized IS training is imparted at a national scale in IT education curricula.

At the same time, companies need to identify their requirements for IS professionals and put talent developing partnerships with educational and training providers by investing in skill up gradation of their existing employees.

Course Duration:  
DREC - 1 Month  
DCPC - 2 Months

Examination: Online

#### Value to Partners

- A unique course in itself.
- No Competition at all.
- Course offered by the leaders in this field since 1994
- Partner will always get latest in technology.
- Data Recovery/data care/business continuity software tools are indigenously designed for the Practical.
- Wide segment of candidates, maintenance engineers, corporate customers and government organizations.
- Faculty gets trained directly from Unistal.
- Easy to convince students since this course helps them in becoming different from others in job hunting and also gives them an opportunity to start their own business.
- Easy to teach since all theory is linked to practical.
- Quick startup since course requires no extra or special hardware. Existing infrastructure is enough.

#### Courses Offered

##### 1) Data Recovery Expert Course

- Handling data recovery cases.
- Performing data recovery practically.
- Understanding disk crash and data loss.
- Deep knowledge of file system internals.
- Identifying the correct mode for data recovery.
- Recovering from bad hard disks.
- Interesting facts about data storage and techniques.
- How to prevent data loss.

##### 2) Data Care Professional Course

- Data types and its importance
- Data storage & Disk Structure
- Operating systems - Windows, Linux, Novell
- File system structure
- Case studies of data loss
- Data recovery concepts and practice
- Data Loss prevention concepts and technology
- Anti Virus Technologies
- Internet security
- Business continuity solutions
- Disaster recovery technology
- Backup Technologies
- Implementing a business continuity plan

#### Value to Candidates

- Developing a new skill set about data care, security and its implementation.
- Technically aware about the nuances involved in handling it & recovering from a disaster.
- This course will help students get jobs in computer maintenance as well as Facility management firms.
- This course is a necessity for all support engineers
- This course can help young entrepreneurs to start their own data recovery business.
- Practical experience will enhance understanding of operating systems and file system structure.
- Many myths about data and its storage will be cleared.
