Unistal
Data Recovery Professional Expert Program

Be a Data Recovery Professional

Any work done by a computer user is Data. On the event of a disk crash disaster, the disk and application software can be purchased again, but the work done cannot be recreated or purchased. Every user must have the knowledge to handle such data disasters themselves. Users must not be totally dependant on support companies or IT departments for handling such situations for its you who knows your data best!

Unistal Systems Pvt. Ltd. is the Data Care industry's most experienced and technologically advanced provider of data care products and solutions.

Unistal's Business Continuity product range covers data loss prevention, data recovery, automated backup, OS & application restoration. Unistal's Products help user to work with maximum efficiency without any time and data loss.

Unistal also provides its data recovery solutions 24/7/365 through its services network. With more than 10 years experience performing successful data recoveries, Unistal has served customers across the globe including Secret services, government agencies, corporate houses, and numerous computer users. Unistal has developed the industry's widest range of data recovery products and services, providing desktop, laptop, server, email, database and tape recoveries for all media types and operating systems anywhere, anytime.

Headquartered right in the heart of New Delhi, India has three offices and 100 service labs strategically located across India, Middle East and Europe.

Now with more than a decade experience in the field of data care & business continuity products and services, Unistal's Data Recovery Professional course is designed to educate every computer user about data, it's importance, protection and recoverability.

- Eligibility

Course Duration: 1 Month
Examination: Online

Course Overview

A practical oriented course which imparts training in data recovery. First a detailed study of data types, file systems and operating system fundamentals is done. A step by step procedure of how a file is written and read from the disk helps in better understanding of the file system. Using this information is described how data loss occurs, how it can be recovered and under what circumstances data recovery is partial or not possible too. Special emphasis is given on case studies and practical recovery concepts.

This course is self explanatory with pictures and clips describing the actual data recovery process. The self data recovery practice software helps you to get a feel of the data recovery procedures and cases.

- Handling data recovery cases.
- Understanding disk crash and data loss.
- Deep knowledge of file system internals.
- Identifying the correct mode for data recovery.
- Recovering from bad hard disks.
- Interesting facts about data storage and techniques.
- How to prevent data loss.
- Support from Unistal - Experts since 1994.

Who should Enrol:

Students from faculties like BCA, MCA, BE, BTech, MBA, Polytechnic, ITI, Diploma in computers etc. Support engineers of various computer maintenance companies, IT professionals and computer departments of any firm.

Course Benefits:

- Start your own data recovery center.
- Flash your certification to get jobs as a support engineer.
- IT Engineers can enhance their skills for better opportunities
- Awareness about the importance of data and how to keep it safely.
- Candidate will be technically aware to handle crisis situation.
- On the completion of this course the candidate will be completely aware of the importance of data, the nuances involved in handling it, recovering from a disaster and the means of data loss prevention.
- ·This course will help company executives be more careful (since 40% of data loss cases are due to user negligence) about handling data and hence more responsible towards data care.
- Many myths about data and its storage will be cleared..
